Rental Filtration Solutions for Water Quality Problems

Amazon Filters has introduced **a new rental service for municipal water companies** to help them ensure their customers receive excellent quality water through the use of mobile filtration skid units.

Globally climate change

is stressing drinking water supplies as a result of increases in temperature, shifts in precipitation patterns, and an increase in the frequency of flooding and droughts. Such conditions can result in short to medium term water quality problems.

A range of configurable skid mounted filtration units

is now available to rent from Amazon Filters. Available to rent these mobile filtration platforms eliminate the need for you to invest in capital equipment that may be sitting idle for much of the year. Flexible rental terms mean you only pay for when you need it.

Proven

to maintain the quality of municipal water supplies for flow rates up to and exceeding 100 m³ per hour, Amazon Filters skid mounted filtration platforms can be quickly configured to optimally solve problems such as high levels of turbidity, chlorine or manganese removal and elimination of cryptosporidium contamination.

Drawing

upon its proprietary SupaPore and SupaPleat pleated and SupaSpun depth filter technologies,

Amazon Filters skid mounted filtration systems offer longer life, greater throughputs and lower operating costs than competitive systems.

For further information

on renting a skid mounted filtration system to safeguard your water supply please contact Amazon Filters on +44-(0)1276-670600 / sales@amazonfilters.co.uk.

Amazon Filters Ltd

Amazon Filters Ltd. design and manufacture an extensive range of liquid filtration systems, providing one of the widest selections of filter vessels, along with depth and pleated cartridges for use throughout the process industries. As a leading manufacturer of filtration systems, Amazon Filters can offer a solution to meet all filtration requirements. Amazons' filters are manufactured in clean room conditions and all products come with detailed Product Validation Guides and Technical Support documentation.
