

PRESS RELEASE

Sensitive HPLC Refractive Index Detector

Designed with touch panel screen and a highly intuitive user interface – **Biotech Fluidics REFRACTiMASTER®** is a next generation **refractive index detector** purpose built for modern **HPLC analysis**.

Operating from room temperature up to 80 °C,

the design of REFRACTiMASTER® offers unmatched baseline stability. Unlike traditional RI detectors that may take up to 1 hour to be fully stable – the REFRACTiMASTER® is ready to deliver reliable, reproducible results in just a couple of minutes from turning on.

Its sensitivity makes it the perfect RI detector

to integrate with any modern HPLC system and to achieve peak performance even when faced with the most challenging applications. Our investment in stock means that REFRACTiMASTER® refractive index detectors are available on short delivery times.”
